

Emily Morrow

Girl Scouts in STEM

Sparking interest in science, technology, engineering and mathematics, Emily hosted workshops to engage Girl Scouts in robotics. Through hands-on experiences at day camps, Emily taught a class of 115 Girl Scouts about robotics, introducing girls to new career pathways and passions. Her Gold Award project inspired curiosity and creativity for innovation and helped Girl Scouts envision themselves in professional roles typically held by males. Emily was particularly impressed by seeing girls step into leadership roles after learning the basics of robotics, which served as a clear testament to the impact of her project. Continuing her passion for science and technology, Emily plans to pursue a career in biomedical engineering.
