

Sarah Witte

STEAM Kits

Combining her love for art and science, Sarah created STEAM kits to champion curiosity and creativity at the St. Vincent de Paul's Dream Center, serving low income and unhoused youth. As a Girl Scout, Sarah had the chance to participate in STEAM programming and used her project to advocate for inclusivity in Girl Scouting, motivating her to extend these same opportunities to others who lacked access to similar programs. As a girl delegate, Sarah's leadership and advocacy have played a crucial role in ensuring children have access to valuable programs that not only introduce them to various careers but also inspire them to take action toward improving their future. Sarah created 35 STEAM kits containing materials and instructions so children can become inspired and empowered to pursue innovative, problem-solving and artistic careers. As Sarah shifts her focus to addressing food insecurity, she is pursuing a degree in industrial engineering with a minor in food studies at the University of Arizona.
